Signs and symptoms of articulation and phonological disorders Articulation disorders. Articulation refers to making sounds. The production of sounds involves the coordinated movements of the lips, tongue, teeth, palate (top of the mouth) and respiratory system (lungs). There are also many different nerves and muscles used for speech. If your child has an...

Speech Therapy Products, Private speech therapy sessions

These simplified speech rules are called phonological processes. For example, the sound produced in the back on the mouth, such as /k/ and /g/ are more difficult than the sounds made in the front of the mouth, such as the /t/ and /d/ sounds. The /k/ sounds then become /t/ and the /g/ sounds then become the /d/ sound. Therefore you may hear a child say /doh/ for the word “go”...
